Claim 3 (canceled).

Claim 4 (canceled).

Claim 5 (canceled).

Claim 6 (canceled).

Claim 7 (canceled).

Claim 8 (canceled).

Claim 9 (canceled).

Claim 10 (currently amended): ~~[[The]]~~ An individual authentication system using a recording medium according to claim 6, 7, 8, or 9 6, 7 or 8, wherein, the recording medium being constituted by a memory function by using an electronic device in which a memory function is built,

the memory function having functions of:

registration information recording means which registers both user information including at least one information unit known by a user to be registered in authentication and non-user information including at least one information unit unknown by the user for user authentication in the recording medium in advance to record registration information; and

access information recording means which records access information given to the user, comprising

an authentication computer having:

access information comparison determining means which confirms, when a user candidate inputs access information, that the access information is access information given to the user candidate in user authentication;

registration presenting means which outputs the registration information recorded on the registration information recording means on the basis of generation of a confirmation signal from the access information determining means;

user information determining means which compares input user information selected from the presented registration information with the recorded user information for authentication;

an authentication signal generating means which generates an authentication signal to the electronic device in which the recording medium is built on the basis of authentication determination of the user information determining means to permit the user to use the electronic device; and wherein

the user information is selected from an image in an episode memory of the user; and

at least one of the user information is an information unit for an unwilling authentication signal used when user authentication is performed despite the intention of the user.

Claim 11 (currently amended): The individual authentication system using a recording medium according to claim ~~6, 7 or 8~~ 10, wherein the non-user information is non-user information synthesized on the basis of the user information.

Claim 12 (currently amended): The individual authentication system using a recording medium according to claim ~~6, 7 or 8~~ 10, wherein pieces of individual registration information and pieces of access information are held.
